ROI¹ and megakaryocytes

Automatic region of interest (ROI) detection and identification of megakaryocytes (MGK)

¹ ROI (Region of interest) is a region of interest with evenly distributed bone marrow cells. In these areas, cells are searched and captured at x1000 magnification.

Extended focus

Clear image of each bone marrow cell thanks to the extended focus. Independent focus in the Z-plane on every single bone marrow cell

Bone marrow cell gallery

Displaying identified bone marrow cells as an image gallery
